

Abstract of the Disclosure

5 A striking tool comprising a head assembled to a handle having a
long axis is characterized in that the head comprises a closed cavity
extending into the head in the direction of the long axis, an opening through
a wall of the head into the cavity, the opening extending at substantially a
right angle to the long axis, and a spreading element inserted through the
opening and spreading a portion of the handle within the cavity to urge
10 against walls of the cavity to secure the head to the handle.
